

## Numigral I Seed Counter

- Adjustable size exclusion between 1 to 10mm allows virtually any kind of seed or small item to be counted
- Adjustable vibration frequency makes optimisation of analysis easy
- Auto-off feature means that no time is wasted due to over counting

### Product Description

The Numigral I seed counter provides the perfect solution to the tedious task of small item counting. The combination of its unique vibrating plate and infrared counting system means that virtually any number of small items can be counted accurately and quickly. What's more the Numigral can be programmed with your target number, when it reaches the target it automatically switches off saving you from the mundane task of counting by hand or watching a machine count.

The Numigral operates by using a vibrating plate to move the items to be counted up a ramp, through an adjustable size gate and through the sensor. The counted items drop out of the front of the machine to be collected. The vibration of the plate can be optimized to give the perfect counting rate while the size gate can be adjusted between 1 and 10mm to prevent oversized items or groups that can distort the count.

### Product Features

Counting range:	1 to 9999 items
Weight (boxed):	12 kg
Dimensions (boxed):	48x26x16 cm
Item size range:	1 to 10 mm
